預防及治療糖尿病的親密拍檔 No More Painful Blood Tests for Diabetics

糖尿病越趨年輕化，病人必須嚴控血糖，故不少病人須每天採指尖一滴血來檢視血糖濃度；在納康科技有限公司科學家們的努力下，這種每日見血的方式有了新的突破，就是可以轉用他們研發的「Kiss & Tell」唾液葡萄糖測試，只需在盛器上置上口水，沒有痛楚，也不必擔憂傷口感染，五分鐘後便可知道血糖濃度，方便又有效。該先進發明於2014年「日內瓦國際發明展」中榮獲金獎及中國代表團獎。

Diabetes patients are getting younger and they must monitor and control their blood glucose level closely. Thus, many patients have to prick their fingers every day to sample some blood for blood glucose level reading. With the laudable efforts made by its research experts, eNano Health Limited introduced a revolutionary method to read glucose level without pricking your fingers. Kiss & Tell is a first-of-its-kind saliva-based glucose reader for home use. Just spit in the spoon and your glucose level will show in 5 minutes. It is convenient and accurate with absolutely no pain. You don't worry about wound infection either. Kiss & Tell won a gold medal and an awarded prize of China Delegation of Exhibition in the 42nd International Exhibition of Inventions of Geneva in 2014.
